

OCR → GenAI Document Intelligence: Funding Request

30–50% lower cost/doc · **STP 65–75% → 90%+** · **Onboarding 3–8 wks → 1–5 days** · Document stream becomes a *strategic data asset*

01 · CUSTOMER BUSINESS PROBLEM

Legacy OCR has hit its economic ceiling.

- **40–60%** of total processing cost is consumed by manual exception handling and rework.
- **65–75%** STP ceiling on millions of documents across thousands of layout variations.
- **3–8 weeks** to onboard new document types — delaying customer launches and revenue.
- **No semantic understanding** — OCR cannot validate, detect anomalies, or read handwriting.

02 · HOW CONDUENT - MICROSOFT SOLVES IT

AI-native platform that extracts meaning, not just text.

- **Azure AI Document Intelligence + Vision** — one multimodal pipeline replaces brittle templates.
- **Azure OpenAI** — interprets novel layouts, validates across documents, generates next-best-action.
- **Microsoft Fabric + OneLake** — turn documents into a governed, reusable analytics asset.
- **Purview + AI Content Safety** — built-in compliance, auditability, and responsible-AI governance.

03 · IMPACT IF SOLVED

Measurable near-term returns; durable strategic advantage.

- **30–50% lower cost per document** — millions in annual savings at scale.
- **STP from 65–75% to 90%+** — cycle time compressed from days to minutes.
- **Onboarding in 1–5 days** — faster customer go-lives, less revenue leakage.
- **New revenue streams** — analytics, self-service, and insight-led service differentiation.

04 · COST OF INACTION

Status quo locks in rising cost and falling competitiveness.

- **Manual exception spend keeps growing** as document volume and complexity rise.
- **Competitors gain structural cost advantage** through GenAI-driven cycle times.
- **Compliance & audit risk persists** without reasoning, validation, or end-to-end lineage.
- **Engineering trapped on template upkeep** — technical debt up, ROI on IT spend down.
